

CLARODOR

Low Maintenance
Water Polisher
Treats and Freshens
Wash Water for
Ongoing Reuse

Are you pumping muddy water back onto your washrack?
Recycling run-off wash water from dirty equipment works just fine for the initial cycle, but soon your captured run-off becomes a dirty – and smelly – source of rinse water. Your wash bay smells like musty, dirty laundry and your rinse stream is as muddy as your waste stream. Your staff hates the chore and your 'cleaned' equipment is still covered with a film from previous washes.

RIVEERTM

The Solution is Clear with RiveerSM

CLARODOR

The ideal addition to any washing system, the Riveer Clarodor removes offensive odors while clarifying your wash water for a cleaner rinse... time and time again. Using simple, easy to maintain technology, the Clarodor upgrades your equipment washing system without complex, expensive water polishers costing three times as much.

The Riveer Clarodor produces clear water that:

- Won't support the growth of biological contamination (foul odor)
- Doesn't contain silt that damages pressure washers and nozzles
- Doesn't leave a film as it dries
- Doesn't damage glossy surfaces
- Uses common liquid polymer for flocculation
- Dirt collects through flocculation then settles to the bottom of the tank for easy removal
- Mixing tubes have no moving parts
- Auto drain sequence puts the solids into a hopper bag or drum bag for easy disposal
- Available in a variety of flow rates to support a single operator or a multiple bay complex
- Automated mixing system is designed to set it and forget it once the system has been installed
- Simple bypass when not needed; saves on chemical use
- Skid mounted for plug and play installation in a configuration that suits your wash rack area

Specifications

- Process Flow Rate: 0-20gpm
- 1000 gallon flocculation tank
- Overflow effluent to next process
- Grundfos variable speed influent pump
- Automatic Floc Dosing Pumps
- 55gallon Flocculant mixing tank
- PH process monitoring system
- Low and High Floats for system protection
- Bypass switch disables the flocculation process and allows tank to be used as settling tank.
- Solids collection hopper
- Solids decanting filter
- 76" W x 70" D x 112" T
- 1,435 lbs Shipping Weight

A stand alone system, Clarodor produces clear, odorless water for reuse.

Riveer employs a quality management system that is ISO 9001:2008 certified.
